

ATTENTION MINI TALON OWNERS AND OPERATORS

VERY IMPORTANT INFORMATION

Please instruct the young operator on how to correctly operate the throttle and brake. Instruct them to NOT “RIDE THE BRAKE” while operating this kart. Doing so will cause the rubber disc to shred and wear prematurely.

The young operators of this kart are not trained drivers. Youngsters are inclined to use their right foot on the accelerator and their left foot on the brake at the same time.

Instruct your young operator to completely take their foot off the throttle pedal prior to depressing the brake pedal. With the kart sitting idle and the engine off, have your youngster practice moving their right foot off the throttle pedal prior to applying pressure to the brake pedal. Insure they understand that applying pressure to the brake pedal while pressure is applied to the throttle pedal is an incorrect operating procedure and will cause the kart to work improperly.

Insure that the throttle cable is adjusted in accordance with the owners manual. If you are unsure how to adjust, or are uncomfortable with your ability to correctly adjust, please see your dealer for assistance.

Shredding of the rubber disc, and premature wear of the rubber disc, are caused by incorrect operation and are not covered by warranty.
